

## Homework 4, Part I: Concentration Inequalities and Law of Large Numbers

**Submission Guidelines:** Please combine all your write-ups (photos/scanned copies are acceptable; please make sure that the electronic files are of good quality and reader-friendly) into [one single .pdf file](#) and submit the file via E3.

**Problem 1 (Techniques of Chernoff Bound)**

(12+12=24 points)

Let  $X_1, \dots, X_N$  be non-negative independent random variables with continuous distributions (but  $X_1, \dots, X_N$  are not necessarily identically distributed). Assume that the PDFs of  $X_i$ 's are uniformly bounded by 1 ([that is, for every  \$X\_i\$ , we have  \$f\_{X\_i}\(x\) \leq 1\$ , for all  \$x \in \mathbb{R}\$](#) ).

(a) Show that for every  $i$ ,  $E[\exp(-tX_i)] \leq \frac{1}{t}$ , for all  $t > 0$ .

(b) By using (a), show that for any  $\varepsilon > 0$ , we have

$$P\left(\sum_{i=1}^N X_i \leq \varepsilon N\right) \leq (e\varepsilon)^N.$$

(Hint: For any  $t > 0$ ,  $P(\sum_{i=1}^N X_i \leq \varepsilon N) = P(e^{t \sum_{i=1}^N X_i} \leq e^{t\varepsilon N}) = P(e^{-t \sum_{i=1}^N X_i} \geq e^{-t\varepsilon N})$ )

**Problem 2 (Strong Law of Large Numbers)**

(12 points)

Consider two sequences of random variables  $X_1, X_2, \dots$  and  $Y_1, Y_2, \dots$  defined on the same sample space. Suppose that  $X_n$  converges to  $a$  and  $Y_n$  converges to  $b$ , almost surely. Show that  $X_n \cdot Y_n$  converges to  $a \cdot b$ , almost surely. (Hint: Consider two events  $A, B$  defined as  $A = \{\omega : X_n(\omega) \text{ does not converge to } a\}$  and  $B = \{\omega : Y_n(\omega) \text{ does not converge to } b\}$ )

**Problem 3 (Convergence in Probability)**

(12+12=24 points)

A sequence of random variables  $X_1, X_2, \dots$  is said to converge to a number  $c$  **in the mean square**, if

$$\lim_{n \rightarrow \infty} E[(X_n - c)^2] = 0.$$

(a) Show that convergence in the mean square implies convergence in probability. (Hint: For every  $\varepsilon > 0$ , consider  $P(|X_n - c| \geq \varepsilon)$  and use Markov's inequality)

(b) Please construct an example that shows that “convergence in probability” does not imply “convergence in the mean square.”
